

STEPHEN M. COLOMA

Metro Manila, Philippines | hello@stephencoloma.com | (+63) 945-820-2981 • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

EDUCATION

Saint Louis University - BS Computer Science

Aug 2022 - May 2026

Relevant Coursework: Summa Cum Laude, DOST Scholar, Software Engineering, Artificial Intelligence

EXPERIENCE

Full-stack Web Developer

Aug 2025 - May 2026

COMELEC - Saint Louis University | Baguio City, Philippines

- Migrated CI/CD from manual SSH deployments to using **GitHub Actions**, **improving deployment time by around 3-5x** and **increasing uptime to around 99%** especially during releases and hotfixes.
- Containerized the application with **Docker**, **reducing setup time by around 70%** and ensuring consistent, reliable deployments across dev and production environments.
- Developed an automated database backup script via **cron jobs** running every **30 minutes**, **preserving 99.9% of election data** for manual verification and preventing data loss on constrained server storage.
- Maintained and enhanced a legacy voting system (**HTML, CSS, PHP**), **ensuring 99% uptime during elections** and **developed 3+ stakeholder-requested features** and **fixed 5+ legacy bugs**.

Full-stack Developer Intern

June 2025 - Aug 2025

Old.St Labs | London, United Kingdom

- Implemented automated notifications using **Slack** and **ClickUp webhooks** for an internal Task Tracker App, **ensuring 85% of task assignments reached a team of 80 devs promptly** and **improving the communication workflow** of the developers **by 50%**.
- Developed cloud-native applications within an **Nx Monorepo** using **Next.js** and **NestJS**, implementing **Clean Architecture (controllers, service, repository)** to ensure scalable and maintainable codebases.
- Architected **event-driven and serverless microservices** using **AWS Lambda, API Gateway, and SQS**, with secure identity management via **Cognito** and high-performance data modeling in **DynamoDB**.
- **Developed 2+ internal projects**, including a full-stack recipe app and a RESTful book-author API, to practice event-driven and scalable serverless architecture.

RECENT PROJECTS

SetMyTime | Typescript, Node.js, Next.js, Prisma, Supabase, PostgreSQL, OAuth

- Developed full-stack appointment scheduling app with **Next.js** and **Supabase**, providing an automated booking solution that is **currently powering operations for 5 small business owners**.
- Enhanced authentication and security by leveraging **Supabase Google OAuth** and **Row Level Security**, **securing 100% user accounts** and **500+ appointment records**.
- Designed a user friendly UI, leveraging **Zod** for form validation and **Framer Motion** for interactive UI.

Kitakita | Typescript, Node.js, NestJS, Next.js, DynamoDB, AWS CDK, AWS SDK, Serverless Architecture

- Designed a serverless event management platform using **3 AWS CDK stacks** to provision **10+ resources (Lambda, API Gateway, DynamoDB, SQS, SES, S3, Route 53)**, enabling single-command deployments.
- Built an **event-driven notification pipeline** with **SQS** and a dedicated **Lambda-SES consumer**, **processing 8 notification types** including account verification, approvals, waitlisting, and cancellations.
- Configured **LocalStack** with **Docker** for local AWS emulation across **12 services**, enabling offline CDK deployment and **reducing cloud deployment iteration by 80%**.

Lumina AI | Typescript, Python, Next.js, Fast API, Docker, Artificial Intelligence, Deep Learning, Hugging Face Spaces

- Developed a full-stack proof-of-concept web application using **Next.js** for classifying non-small cell lung cancer (**NSCLC**) subtypes from CT and PET scans using a **3D DenseNet AI model**.
- Built a **FastAPI backend** to serve the AI model, which **reduces the model's inference time from 5 minutes to sub-15 seconds** responses for uploaded CT and PET scans.
- Containerized and deployed the backend using **Docker** on **Hugging Face Spaces**, **improving reproducibility** and enabling on-demand public inference access.

TECHNICAL SKILLS

Frontend: Typescript, React, Next.js, Vite, Tailwind, Zustand, TanStack Query, TanStack Form, Axios

Backend: Node.js, NestJS, Express.js, AWS SDK, MySQL, PostgreSQL, DynamoDB, Supabase

Tools: AWS, AWS CDK, Docker, Git, GitHub, GitHub Actions, Postman, Jest, Swagger, VSCode, Cursor, Antigravity

Other Skills: CI/CD Pipelines, SDLC, Agile Development, Software Engineering, Serverless Architecture
